

Html 1.1

HTML Introduction

HTML(HyperText Markup Language) documents are known as webpages.

The combination of web pages are

known as websites. HTML file contains HTML tags and plain text. To run HTML file we will use two things.

A Simple HTML Document

```
<html>
  <head>
    <title> </title>
  </head>
  <body>

  </body>
</html>
```

Example Explained

- > The <html> element is the root element of an HTML page
- > the <head> element contains meta information about the document
- > the <title> element specifies a title for the document
- > the <body> element contains the visible page content

HTML Editors

HTML can be edited by using a professional HTML editor like: Adobe Dreamweaver Microsoft Expression Web CoffeeCup HTML Editor However, for learning HTML we recommend a text editor like Notepad (PC) or TextEdit (Mac). We believe using a simple text editor is a good way to learn HTML.

Text Editors	Browsers
Notepad	Internet Explorer
Ultraedit	Mozilla Firefox
Notepad++	Google Chrome
Textpad	Opera
	UC
	Safari
